

NUXERA - Testing, Visual Evidence and Quality Status

Document generated from NUXERA evidence

Fecha	2026-07-29
Paquete	English
Producto	NUXERA Financial Intelligence
Uso	Revision interna, socio, inversionistas y decision de cutover

Date: 2026-07-29 Reviewed base: <https://nsd-pi.vercel.app> Purpose: provide evidence for internal review, partner review, investor presentation and the decision to replace Nexus with NUXERA.

Executive Summary

This session confirms that the visible NUXERA experience is active on Vercel, the main English views load correctly, Nexus does not appear as a visible brand in the automated scenarios, and the critical local tests pass.

Main results:

- Automated English screenshots: 4 scenarios executed, 4 passed, 0 failed, 0 visible Nexus references.
- Focused backend tests: 4 test files passed, 86 tests passed.
- NUXERA frontend tests: 1 test file passed, 125 tests passed.
- Production frontend build: passed.
- Vercel smoke: main and production URLs return HTTP 200, show NUXERA and do not show visible Nexus.
- Render/backend smoke: in this run the backend timed out after 20 seconds on health and protected routes. This does not invalidate the frontend or local tests, but it remains an operational latency/availability item before a critical live presentation.

Visual Scenarios Executed

1. Public Site

URL: <https://nsd-pi.vercel.app/> Expected: NUXERA Financial Intelligence identity visible. Result: passed. Visible Nexus: no.

Public site

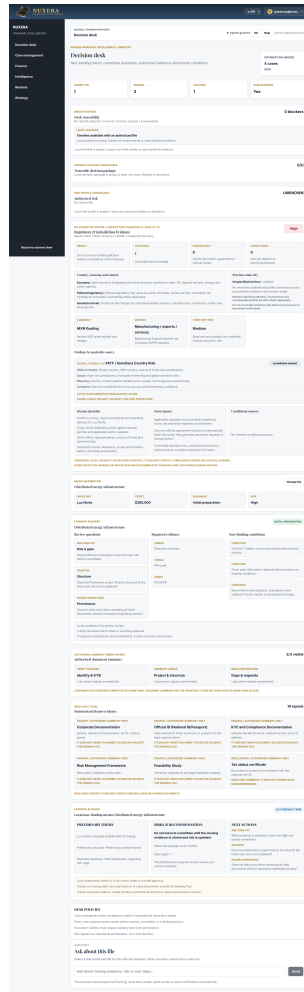

2. Applicant

URL: <https://nsd-pi.vercel.app/dashboard> Simulated session: applicant.qa@nuxera.local
 Expected: NUXERA shell and Applicant role. Result: passed. Visible Nexus: no.

Applicant

URL: <https://nsd-pi.vercel.app/dashboard/nuxera/cases> Simulated session:

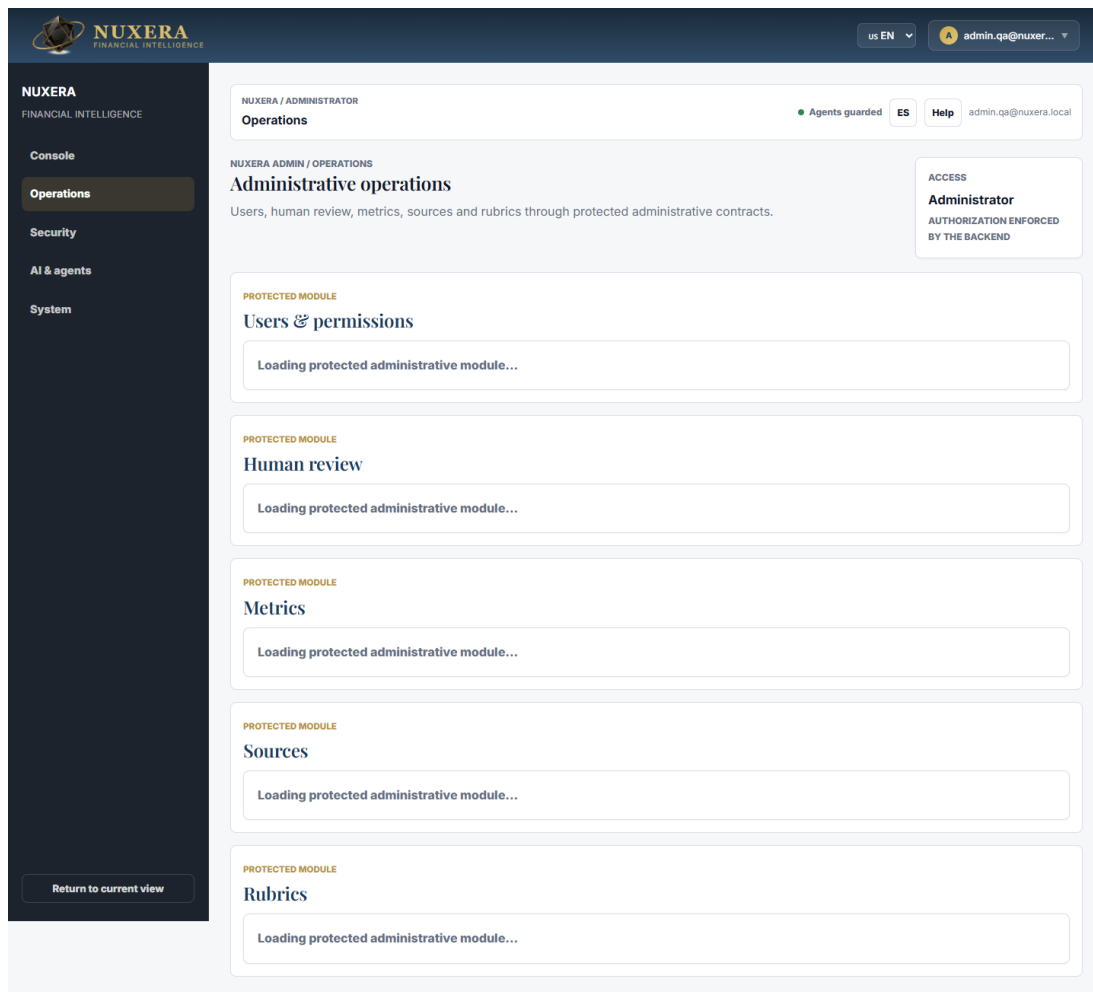

NUXERA Financial Intelligence

Funding provider

4. Administrator

URL: <https://nsd-pi.vercel.app/dashboard/nuxera/operations> Simulated session: admin.qa@nuxera.local Expected: NUXERA shell and Admin role. Result: passed. Visible Nexus: no.

Administrator

Technical Tests Executed

Focused backend:

- Scope: NUXERA jurisdiction intelligence, operational persistence, conversation agent readiness and NUXERA routes.
- Result: 4 files passed, 86 tests passed.

Frontend NUXERA:

- Scope: NUXERA experience tests.
- Result: 1 file passed, 125 tests passed.

Build:

- Scope: Vite production build.
- Result: passed in 4.58 seconds.

Remote smoke:

- Vercel main: HTTP 200, NUXERA visible, Nexus not visible.

- Vercel production/alias: HTTP 200, NUXERA visible, Nexus not visible.
- Render health and backend routes: 20-second timeout in this execution.

Interpretation

NUXERA is in good condition for a controlled visual and functional demonstration. The live backend on Render should be warmed, monitored or moved to a more predictable runtime before a high-stakes presentation that depends on API responses.

Presentation recommendation:

- 1 Use Vercel as the primary live demo surface.
- 1 Keep screenshots available as a fallback.
- 1 Avoid depending on Anthropic/Render/NVIDIA live calls unless the service is warmed beforehand.
- 1 Present agents, notifications and persistence as gated operating capabilities, not unsupervised automation.
